- Lesson learned

# introduction

# Hi!

## Ni Putu Sintia Wati

### Latest Work Experiences:

- Cloud/infra Engineer, Alterstay
- Mentor, Bangkit Academy

2023 - present  
2023

### Education:

- Udayana University  
*Bachelor of Computer Science*
- Bangkit Academy  
*Cloud Computing*

2019-2023

2022

**why tech?**  
and how it  
started?

*“why tech, because i used to love computers. the first time i bought a laptop from my father in junior high school, there were a lot of new things i wanted to know. that was how my journey into the technology industry began.”*

2016  
SMK - milih  
jurusan TKJ

2019  
lulus SMK dan  
Kuliah jurusan  
Informatika

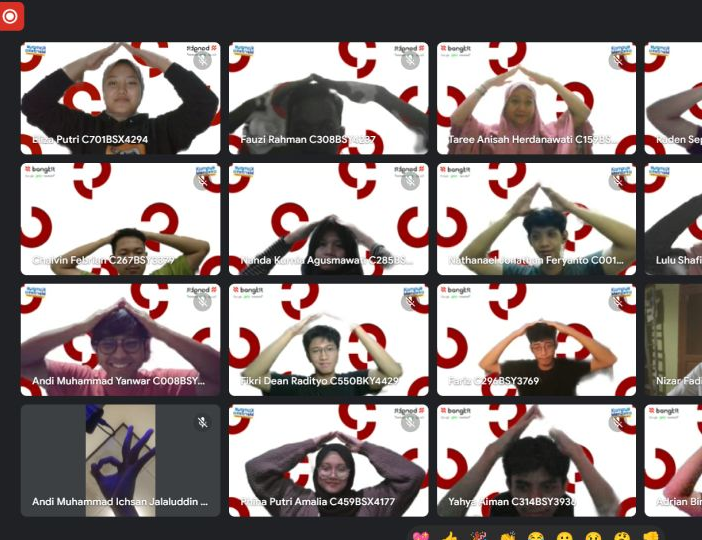

2023  
lulus kuliah

2014  
SMP - 1st laptop

2018-2019  
SMK - ikut  
perlombaan  
yang relate

2020-2023  
ikut beberapa  
kegiatan tech

2023-sekarang  
terjun di tech  
industri

**lowest point**  
during the  
tech sector

## Gender Constructive in tech

There is still a gender constructive system in some places. usually in the division of tasks. not infrequently also in the recruitment period.

## mostly use feeling

women mostly work by using feelings then logic

## conflict in teammate

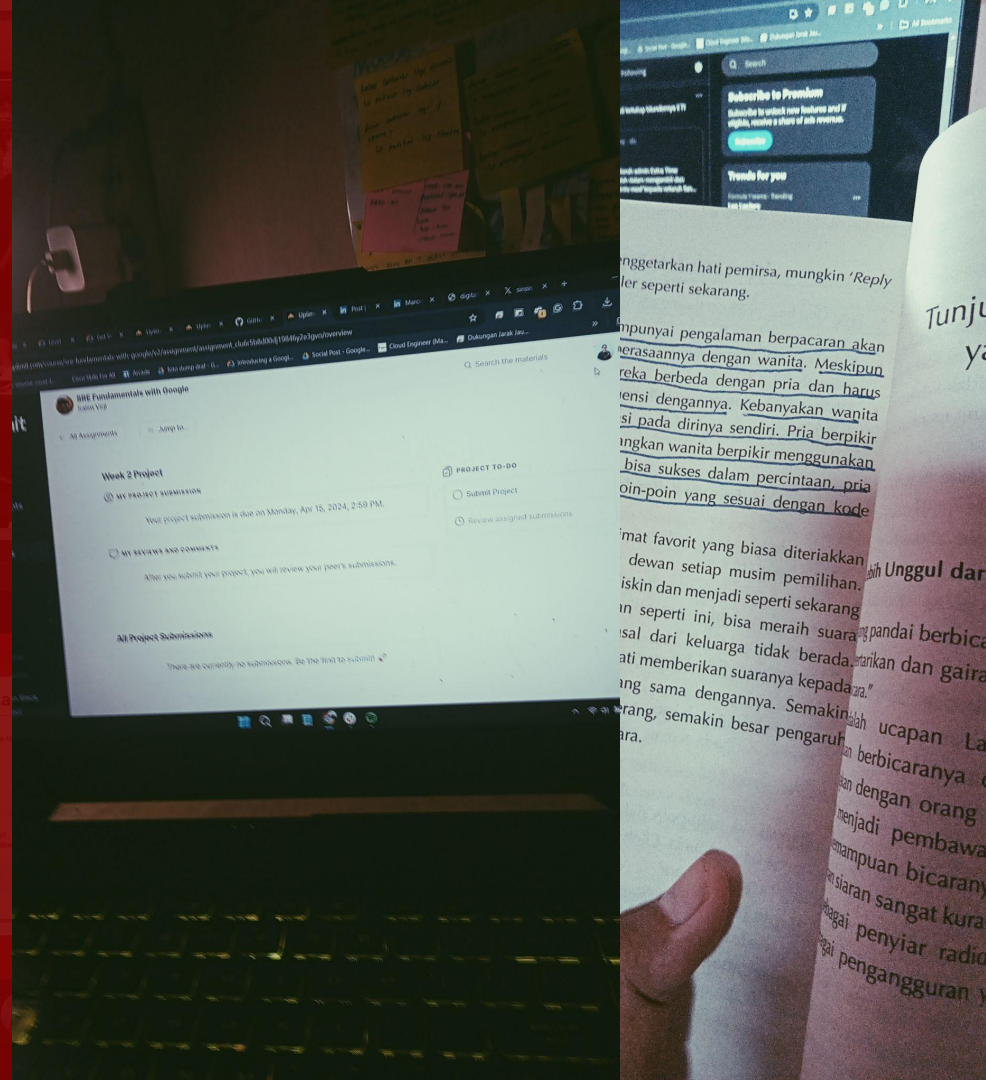

This happens when teammates exalt their ego in the performance of their jobs

# How can I thrive here?

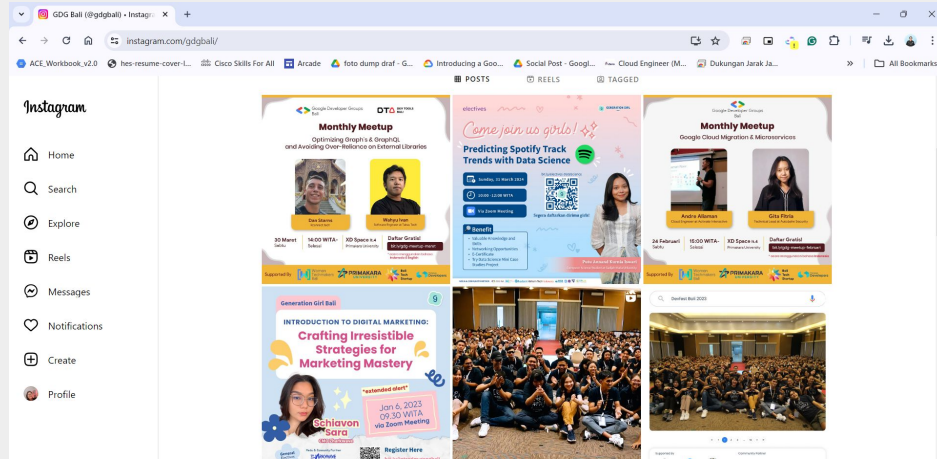

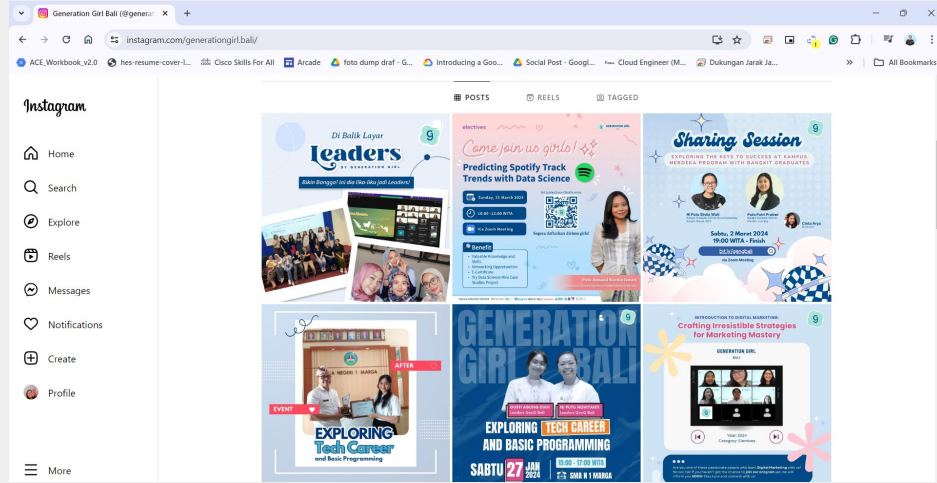

# 1. self-preparation

prepare yourself to enter the tech world such as skills, supporting portfolios, and finding information about the role you want to take.

## 2. build connections from anywhere, especially from the community

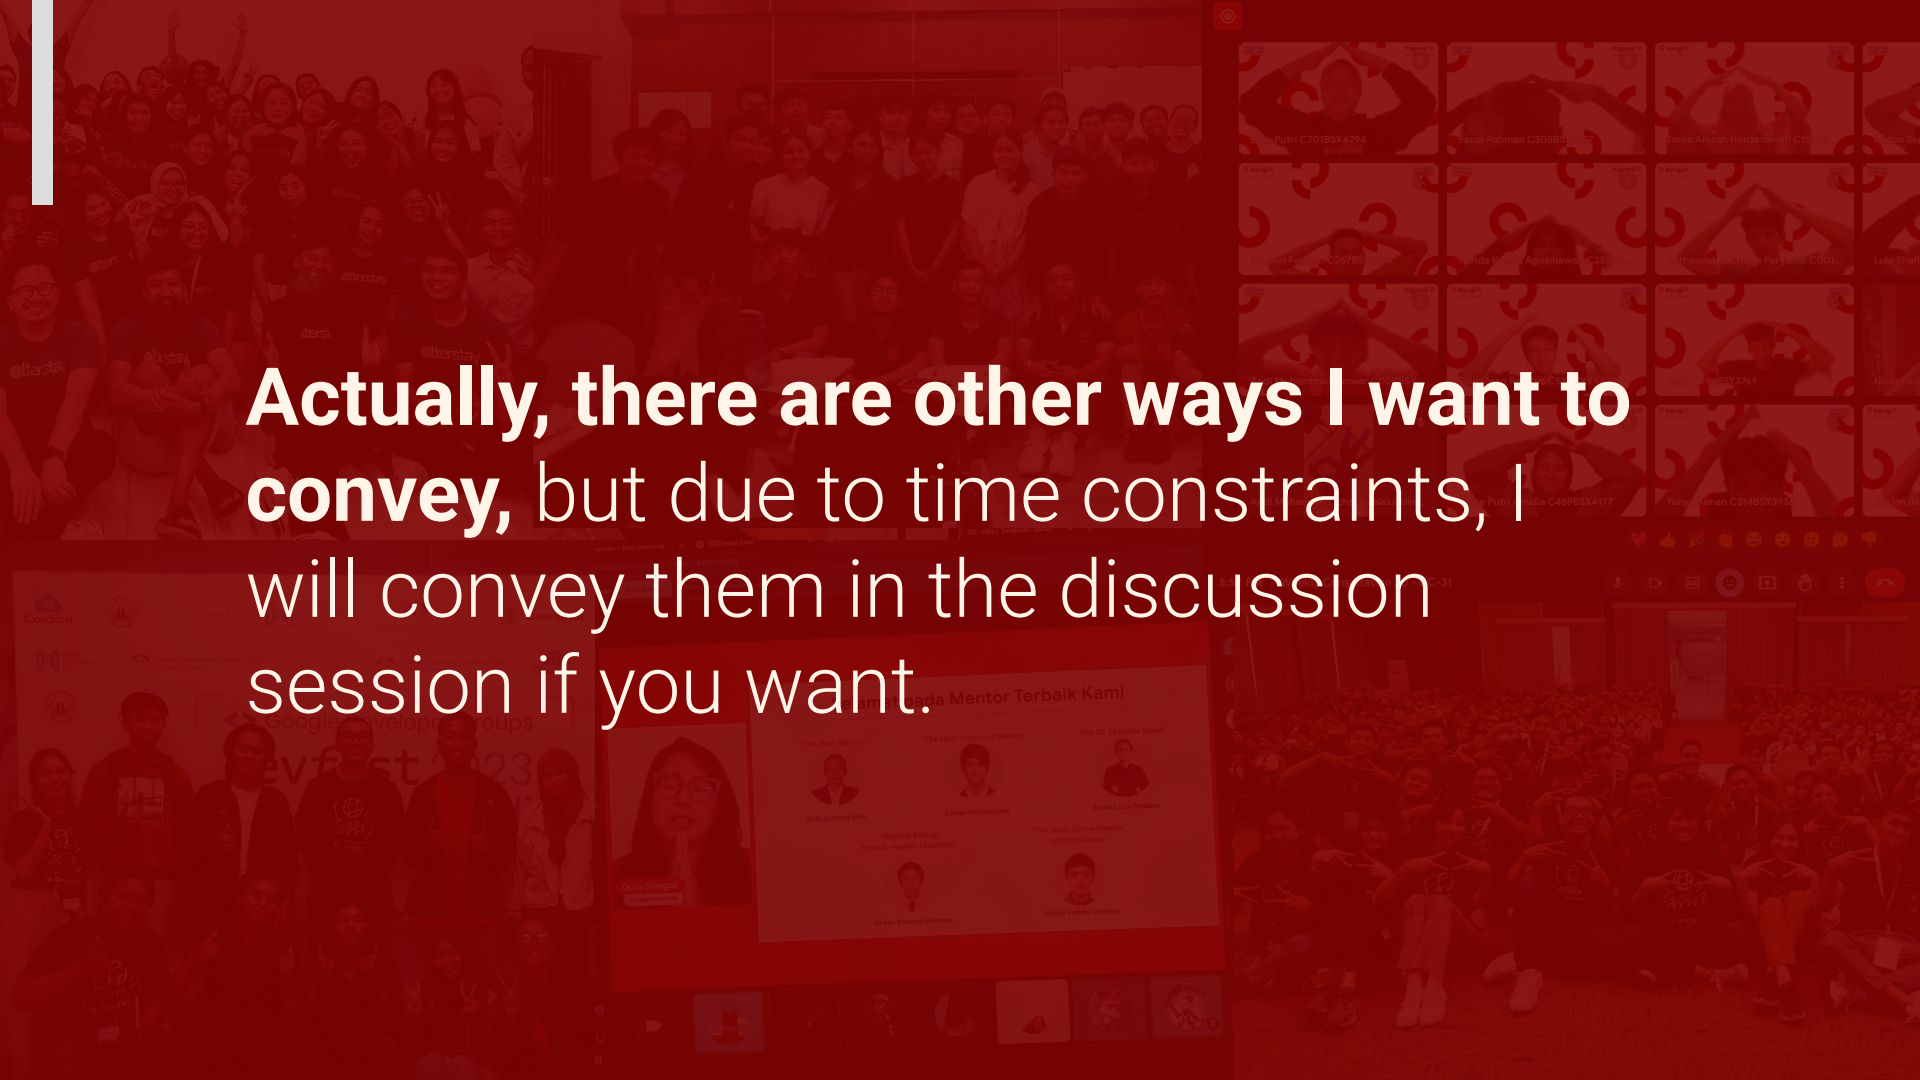

You can build connections from anywhere. don't hesitate to come to the community because there we can also get new knowledge that can be used later.

### 3. if you're burnt out, take a break

as long as we are in the tech industry, it is not uncommon to feel burnout for one reason or another.

**Actually, there are other ways I want to convey,** but due to time constraints, I will convey them in the discussion session if you want.

# Lesson learned

**There's all from me! :D**
